

About us

In 1993 two companies came together to developed a new concept for the installation of Hardscaping materials. One company was a manufacturer of a Worldwide brand of Retaining Walls and Pavers and the other company was a Worldwide manufacturer of Turf Equipment. Both companies brought together their expertise to develop this unique trencher that has revolutionized the installation of edging, retaining walls, paver patios and walkways and irrigation and cable systems.

This cooperation helped develop the patented the features listed below, that had never been attempted by the trenching industry until May of 1995 when the TRENCH'N edge Rotary Trencher hit the Landscape and Irrigation Installation Market.

The following patented features are only available on the ***TRENCH'N edge Trencher***:

1. Blows the trenched material directly onto tarps for easy clean-up.
2. Dual side discharge – blow the material into or out of the planting beds.
3. Cut multiple side by side trenches; for brick edging, large retaining wall block and stone or brick walkways. It's a mini-excavator.
4. Make perfect circles every time by setting the angle on the steer able front pivot wheel.
5. Retractable spring-loaded cutting blade, which allows the trencher blade to retract if it encounters underground obstructions.
6. Replaceable carbide tips are only \$7.50. You don't have to buy a whole new blade.
7. Variable depth guide to adjust the depth from 0" to 12" deep, depending on the model chosen. You don't have to buy multiple blades.

Thank you for your interest in the TRENCH'N edge Rotary Trencher and feel free to call us to discuss your trenching needs. Call us with any questions at 1-800-483-3437 or check us out on the WEB at www.trenchnedge.com for over **100 pictures** detailing the trenchers' flexibility. If you **e-mail your address**, we will send you a **brochure** on each trencher.

Best regards,

Patrick E. Dean
